MIMEsweeper™
Simplifying content security

MIMEsweeper™ EXCHANGEmanager 5.3

Essential internal e-mail security.

Gateway security alone will not protect your organization against digital attacks or the other threats that come from inside your organization. Malware, illegal files and inappropriate material routinely enters networks via web access and devices brought into the office. Never mind that web-based access to Outlook may mean that threats are introduced into your Exchange Server infrastructure without e-mail having gone anywhere near your gateway defenses!

EXCHANGEmanager 5.3 allows you to put these essential internal e-mail controls in place, managing and integrating your internal e-mail policies within the same solution you already use to enable the safe usage of inbound and outbound mail.

The Issues:

Uncontrolled internal e-mail communications – internal e-mail makes up a far larger percentage of legitimate e-mail traffic than inbound or outbound e-mail and needs the same protection against the introduction of malware, and the spreading of inappropriate content

Misuse of your internal e-mail system – stopping the circulation of sensitive information, preventing the sharing of illegal files, or other inappropriate content to minimize productivity-draining e-mail abuse

Compliance – regulations make every organization accountable for how information is shared, stored and distributed between senders and recipients. Not being able to apply policy to internal e-mail or, monitor, track and apply audit trails makes compliance impossible

Legal liabilities – e-mail harassment, profanity, the unsanctioned sharing of sensitive information can all lead to litigation and reputational damage

HR concerns – sexual or racial harassment and the usage of profanity

Security – stopping the circulation of malware around your network through user attachments

The ultimate internal e-mail security solution

MIMEsweeper's EXCHANGEmanager 5.3 in combination with MIMEsweeper for SMTP provides the ultimate e-mail security solution. It lets you secure your Microsoft Exchange Server infrastructure against all e-mail threats and enables you to enforce consistent and highly granular message content filtering policies over all of your Exchange Server messaging.

With the addition of EXCHANGEmanager 5.3 you gain total control over your e-mail infrastructure by coupling together the best security and content filtering technologies available to create a seamless solution for internal, outbound and inbound e-mail.

With EXCHANGEmanager 5.3 you are able to:

- Standardize your internal e-mail communication policies

- Enforce appropriate e-mail interactions across all users

- Protect the exchange of sensitive documents, and

- Ensure your organizations reputation is not damaged by mistakes, inappropriate or malicious e-mail communications.

And, unlike other e-mail information control and prevention technologies, EXCHANGEmanager 5.3 provides immediate results with minimal impact on existing business practices. No other e-mail security solution provides such comprehensive or effective security coupled to ease of management and in-depth control over internal e-mail traffic.

Product Highlights:

Complete security – protection against all internal security threats, yet simple to deploy, configure, manage and maintain

Fully integrated – into MIMEsweeper for SMTP and Microsoft Exchange Server infrastructures

Intuitive web-based management and reporting – with full message tracking, auditing and reporting

Fully integrated into Microsoft Exchange Server 2007 – with easy and intuitive to use MMC snap-in

Monitor mode – discretely discover what's circulating on your network and define effective e-mail policies

Granular e-mail policy creation – with detailed rules for specific users, groups, file types, sizes and file extensions, content in headers, footers, body and attachment properties and more

Microsoft Exchange server cluster awareness – consolidating data and simplifying management and reporting in even the most extensive Microsoft Exchange Server environments

Fully scalable – no limit to mail box user numbers and easily deployed in distributed configurations with load balancing and full fault tolerance

MIMEsweeper™
Simplifying content security

MIMEsweeper™ EXCHANGEmanager 5.3

How it works

EXCHANGEmanager utilizes a Microsoft Exchange interceptor module that is deployed on your Exchange Server to intercept all messages traversing the server and pass them to MIMEsweeper for SMTP for security and content processing.

MIMEsweeper for SMTP then performs:

- Policy identification - recognizing the appropriate policy rule for each message, based on sender and recipient(s)

- Content disassembly - identification of all content by true binary file type, including all known formats (and custom formats through pattern matching) regardless of how well they are obfuscated

- Malware scanning – to ensure there are no malicious payloads within the e-mail

- Content analysis - is sensitive data being smuggled out? Are legal documents being sent to the wrong recipient? Is payment card information or social or national security number information being passed inappropriately? Is someone using profanity?

- Classification and actions – with selection by policy of the right disposal path for each message, including blocking, delivering, attachment removal, rules-based archiving, notification to sender or administrator, and many more.

Evaluate in 'monitor mode' to find out more.

MIMEsweeper EXCHANGEmanager may be deployed in 'monitor only mode' (giving you the results of your internal e-mail policy scanning without the software taking any policy actions).

Given that most organizations do not see and so don't understand how internal e-mail is being used - having a 'monitor only mode' evaluation lets you quantify and understand your internal e-mail issues. And that evidence often makes it easy to justify the benefits of adding EXCHANGEmanager to your MIMEsweeper for SMTP deployment.

For a free trial evaluation of MIMEsweeper EXCHANGEmanager 5.3 please download the software from our website at:
