

# Sophos Mobile Control

Data protection, policy compliance and app management for mobile devices

Give your users the latest mobile technology while keeping your organization's data safe. We help you secure, monitor and control mobile devices on your network with over-the-air control and a self-service portal that makes mobile management easy.

## Key benefits

- › A single solution for iPhone, iPad, Android, BlackBerry and Windows Mobile devices
- › Gives you a central role-based web console
- › Over-the-air device enrollment and policy and command distribution
- › Registers devices and pushes out policies and commands over the air
- › Regularly checks if smartphones and tablets are compliant and mitigate risk by controlling access to company email
- › Lets you remotely locate, lock and wipe devices to prevent data loss and ensure compliance
- › Allows users to register and manage their devices through a simple web-based self-service portal
- › Makes sure the right apps are on the right smartphones and tablets

## Keep your data safe and in compliance with regulations

With Sophos Mobile Control, we let your users work with flexibility while on the move—no matter which mobile device they have.

**Mobile and private** Protects your confidential data by letting you configure mobile devices in a consistent and safe way, including password policies and screen locking.

**Wipe lost or stolen devices** Let admins or users remotely lock devices and wipe data in seconds if a mobile device is lost or stolen.

**Securely access email** Manage access to your organization's email using a secure proxy to Exchange ActiveSync. We regularly check to make sure only compliant devices have email server access.

**Stay in control of your mobile devices** Mobile Control checks the phone state against a set of company rules like jailbreak detection, password configuration or blacklisted apps. The administrator can be notified in the dashboard or access to company email for that device can be automatically blocked.

**Inventory management** Get an overview of all mobile devices in your company and their state. See device model, OS version and many other properties of the device.

## Works with the latest and most popular mobile platforms

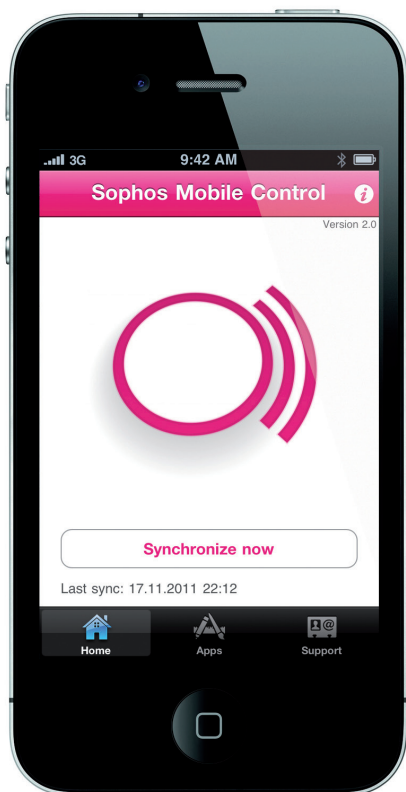

Say yes when people want to use the smartphones and tablets, safe in the knowledge you can keep them secure.

**Enable security features on your devices** Only users that are compliant can access your organization's email servers.

**Approve user apps** An Enterprise App Store for iPhone, iPad and Android lets you define the apps users can or should have installed on their mobile. It works with publicly available apps or apps that you've created in-house.

**Convenient setup** Get over-the-air setup and configuration, giving you control of devices from anywhere, at any time.

## Mobile security that saves you time

We make things much simpler for your IT staff while providing a good experience for your users.

**Single-console management** IT administrators can manage all supported smartphones and tablets from one web-based console. Manage your devices regardless of operating system, service provider, network or location of the device.

**Monitor compliance** A dashboard allows you to see when devices aren't compliant and take action if you need to.

**Self-service portal** Let your users handle routine tasks themselves with a self-service portal that helps them activate a new device. And, if they ever lose it, they can lock or wipe their mobile.

**Find lost phones** Android users can also find their phone or tablet using its GPS or 3G signal and have it display in Google Maps.

**Control apps being installed** Manage apps on your devices and deploy pre-configured apps over the air. You can also uninstall applications, schedule backups and restore devices in exactly the same way.

**Know you're compliant** Our easy web console has a dashboard view to quickly show registered devices and whether they're compliant with policies. We also include auditing so you easily track changes.

**Mobile database** Get an at-a-glance mobile inventory that records all registered devices, as well as device configuration settings, serial numbers, model and hardware details.

**Supports multitenancy** Giving you the flexibility you need to manage multiple independent sites or customers from a single Mobile Control server.
